## Preventing ARP-cache poisoning

- Authenticating ARP messages has been proposed (research) but <u>never implemented</u>
- Static ARP tables (not practical in dynamic environment)
- Detection and correction tools

## Preventing IP forgery

- IPsec Internet Protocol Security provides authentication (and optionally encryption) of IP traffic
- → Uses SHA2 and AES (previously SHA1 and 3DES)
- ✓ Used usually between routers (link and network layers only)
- However IPsec is rarely deployed in practice
