Preventing host discovery and port-scanning

Host discovery uses ICMP ping echo message

→ ICMP can be disabled or reserved to hosts on the same network

Port Scanning uses TCP-syn messages

- TCP connections can be rejected if a source attempts to initiate multiple connections on multiple ports simultaneously
- → Packet filtering can prevent these two scanning techniques

Limitation of a host-by-host packet filtering solution

How to enable packet filtering on every host on the network?

- 1. Each host needs to have packet filtering capability across different hardware, OS and versions
- 2. The admin needs to have administrative privilege on every host to push the packet filtering policy
- → Impossible in practice
